CRM Consultant Challenge for The Optical Studio

Group 3

Group Members:

Largoza, Diane Caryl C.

Llana, Emerlito S.

Lomarda, Angelica .

Maloloy-on, Pauline Vann S.

Marabulas, Jerome M.

May 2026

1. Business Selection Form

The selected business for this CRM consultant project is **The Optical Studio – Ampayon Branch**, a small optical clinic located in Ampayon, Butuan City, Agusan del Norte. The business has been operating for approximately one (**1**) year in the said branch and is composed of around **3–4** staff members, including an eye doctor and clinic assistants.

The Optical Studio provides eye care-related services such as eye check-ups, prescription eyeglasses, reading glasses, contact lenses, sunglasses, frame repairs, and minor eye-related procedures or surgeries for patients. The business primarily serves walk-in patients from the local community and nearby areas.

The business was selected due to its suitability for Customer Relationship Management (CRM) analysis, as it handles continuous patient interactions, prescriptions, and follow-up services that can benefit from a centralized system.

Currently, customer information is managed using a combination of logbooks, receipts, Facebook Page communications, Excel files, and Google Drive. While these tools are functional, they are not fully integrated, resulting in fragmented data management.

A CRM system such as HubSpot can improve operational efficiency by centralizing patient records, organizing transactions, and strengthening follow-up processes for eyeglass orders and patient care.

2. Customer Problem Statement

The Optical Studio – Ampayon Branch currently manages customer and patient information through a combination of manual and digital systems, including logbooks, receipts, Facebook Messenger conversations, Excel files, and Google Drive.

Although these methods are sufficient for a newly established branch, the system is fragmented and lacks centralization. Customer data is distributed across multiple platforms, requiring manual coordination among staff.

The primary operational challenge identified is delays in the processing and delivery of eyeglasses and optical products. Since order tracking is done manually, monitoring progress from inquiry to final claiming can become inefficient, especially as customer volume increases.

In addition, the absence of a unified tracking system may affect long-term customer relationship management, particularly in maintaining structured follow-ups and consistent service delivery.

At its current scale, the business manages its operations effectively; however, scalability issues may arise as the number of patients grows.

3. CRM Solution Rationale

The implementation of a Customer Relationship Management (CRM) system, such as HubSpot CRM, addresses the current limitations by providing a centralized platform for managing patient information and transactions.

Key features relevant to the business include:

- **Contact Management / Customer Database**
  Enables centralized storage of patient profiles, including personal information, prescriptions, medical history, and order records.
- **Deal Pipeline Management**
  Allows tracking of each patient's progress through structured stages: Inquiry → Eye Check-up → Frame Selection → Payment → Processing/Delivery → Claiming.

- **Task and Reminder System**

  Supports follow-up activities for pending orders, ensuring timely updates for patients awaiting their eyeglasses.

- **Activity Logs**

  Records all communication and interactions, helping staff maintain a complete service history for each patient.

- **Dashboard and Reporting Tools**

  Provides an overview of ongoing transactions, completed services, and pending deliveries for better decision-making.

These features collectively improve efficiency, reduce delays in order processing, and enhance overall customer experience.

4. Data Privacy Consideration

The Optical Studio collects patient information such as:

- Full name
- Contact number
- Eye grade or prescription details
- Patient's medical history
- Order and transaction records

To protect this data, physical records are securely stored within the clinic and access is restricted to authorized staff only. Waivers are also required for certain procedures to ensure proper consent and controlled access to patient information.

In compliance with the **Data Privacy Act of 2012 (Republic Act No. 10173)**, the business ensures that personal and sensitive data is collected for legitimate purposes, stored securely, and protected against unauthorized access or disclosure.

This is especially important due to the sensitive nature of medical and vision-related patient information handled by the clinic.
